募集要項

- Designed and implemented efficient data pipelines (ETL) to integrate data from diverse sources into Snowflake and SQL Server databases.
- Analyze and understand existing legacy systems and build processes that utilize new technologies.
- Designed and implemented data model changes in compliance with Data Warehouse standards.
- Design and implement backfill and other data warehouse management processes.
- Develop and execute a testing strategy to ensure high quality data warehouse data.
- Provides documentation, training, and consulting for data warehouse users.
- Strong data and BI awareness to handle multiple priorities.
- Provide input and feedback to assist in process improvement.
- Design and implement efficient data pipelines (ETLs) to integrate data from a variety of sources into Snowflake and SQL Server database.
- Analyze and understand the existing legacy systems and be able to build processes in newer technologies.
- Design and implement data model changes that align with warehouse standards.
- Design and implement backfill or other warehouse data management processes.
- Develop and execute testing strategies to ensure high quality warehouse data.

- Provide documentation, training, and consulting for data warehouse users.
- Have a strong data and BI mindset to handle multiple priorities.
- Provide input and feedback to support continuous improvement in processes.

スキル・資格

Job requirements:

- Extensive experience (5+ years) in designing and implementing fully functional solutions on top of SQL Server/Snowflake or Cloud Data Warehouse.
 - Ability to read and write in English and Japanese.
 - Extensive experience with SQL (8+ years) is a must.
 - Extensive experience (5+ years) in building frameworks using Python.
 - Extensive experience with programming scripting and data science languages such as PowerShell, R, SQL, and JavaScript.
 - Experience in building conceptual, logical and physical data models in enterprise relational and dimensional databases.
 - Strong understanding of Data Warehousing and BI concepts.
 - Knowledge of big data concepts relating to organizing structured and unstructured data is a big plus.
 - Bachelor's degree or higher in a technology-related field (e.g. Engineering, Computer Science, etc.) required, Master's degree preferred
 - Databases – Snowflake, SQL Server, Oracle, Data Bricks
 - Data Integration/Programming Languages - Python, Java, C#, SQL, Stored Procedures
 - Experience with ETL/ELT tools
 - Orchestration – Apache Airflow, Autosys, Tidal
-
- Extensive experience (5+ years) in designing and implementing a fully operational solution on SQL Server / Snowflake or any cloud Data Warehouse.
 - Writing and reading fluency in English and Japanese.
 - Extensive experience (8 + years) in SQL is a must.
 - Extensive experience (5 + years) in building frameworks using python.
 - Strong experience with programming scripting and data science languages such as PowerShell, R, SQL, Javascript etc.
 - Experience in building data models, including conceptual, logical, and physical for enterprise Relational, and dimensional Databases.
 - Strong understanding of Data warehouse and BI concepts.
 - Working knowledge of Big Data concepts in organizing both structured and unstructured data is a big plus.
 - Bachelor's degree or higher in a technology related field (eg Engineering, Computer Science, etc.) required, Master's degree a plus
 - Databases- Snowflake, SQL Server, Oracle, Data Bricks
 - Data Integration/Programming languages - Python, Java, C#, SQL, Stored procedures
 - Experience with any ETL/ELT Tools
 - Orchestration -- Apache Airflow, Autosys, Tidal
