募集要項

About the company

A startup dedicated to transforming the way people work through advanced AI technologies, specializing in AI agents and large language models (LLMs) to deliver innovative solutions that boost productivity and streamline operations across industries.

They operate with a fast-moving, international team and a flexible decision-making culture, continuously leveraging cutting-edge technologies to drive impact and progress.

Why you should join

- Accelerate your career growth by working closely with cross-functional teams, with clear paths toward QA Lead or Tech Lead roles in a fast-growing AI company
- Get hands-on experience with cutting-edge AI technologies like GPT-4 and Claude in a modern, forward-thinking QA environment
- Make a real impact by shaping the quality foundation of one of Japan's leading AI SaaS products, contributing to the reliability and trust of next-gen AI services

Responsibilities

- Lead the overall QA strategy for AI SaaS products
 - Design and execute functional tests for AI Chat, Meeting Notes, and AI Agents
Evaluate prompt quality and ensure consistency and accuracy of AI responses
 - Drive test automation and standardize QA infrastructure
 - Collaborate with SRE and development teams to resolve quality issues
 - Foster a culture of quality across the engineering organization
-

スキル・資格**Requirements**

- 3+ years of hands-on experience as a QA engineer
- Proven experience in test design and automation
- Experience building and maintaining test infrastructure
- Proficiency in both English and Japanese for business communication

Preferred skills

- QA experience with large-scale or high-traffic services
 - Familiarity with AI tools and technologies
 - Experience building QA infrastructure in cloud environments (e.g., AWS, GCP)
 - Comfortable working in fast-paced startup environments
-
