### 募集要項

#### About the company

Join a fast-growing SaaS company offering a marketing and messaging platform that helps B2C businesses collect and analyze customer data to enable high-impact, personalized communication.

Work with a global SRE team that fosters a culture of ownership, collaboration, and transparent communication - empowering members to take initiative and work cross-functionally. Enjoy a flexible hybrid work model and strong career development support through clearly defined paths in both technical leadership and people management.

#### Responsibilities

- Design, build, and maintain cloud infrastructure (primarily on AWS), while ensuring performance tuning, capacity planning, and cost optimization
- Develop and automate CI/CD pipelines, monitoring systems, and incident response processes; define and track SLIs/SLOs
- Collaborate with global teams across Japan, India, and the Philippines to ensure reliable operations and continuous improvement

---

## スキル・資格

### Requirements

- 3+ years in cloud infrastructure (GCP/AWS/Azure)
- Linux admin experience
- CI/CD pipelines, monitoring & alerting
- Docker & Kubernetes
- IaC with Terraform or Ansible
- English & Japanese communication (JLPT N2+)

### Preferred

- Python, Typescript or shell scripting
- Microservices experience
- Database admin & Security knowledge

---
