### 募集要項

#### COMPANY OVERVIEW

Our client is fintech company that offers infrastructure and trading capabilities that enable global financial institutions to access U.S. markets.

#### JOB RESPONSIBILITIES

- Join a fast-moving team as a senior backend engineer focused on high-throughput, distributed systems
- Strengthen and scale their core order management engine for performance and reliability
- Optimize transactions per second (TPS) and system efficiency
- Design and implement new features across trading infrastructure
- Expand platform capabilities to support additional asset classes
- Contribute to the development of core trading strategies around retail order flow

- Collaborate directly with the founding team on high-impact technical decisions
- Play a key role in shaping the technical direction and leadership of the engineering team

#### JOB REQUIREMENTS

- Proven experience building high-throughput, real-time distributed systems with 99.9%+ uptime
- Proficiency in Golang preferred; Rust, Python, or C++ also considered
- Strong background in asynchronous processing, pub-sub architectures, websockets, and batch systems
- Expertise in database scalability and systems-level performance optimization
- Hands-on experience with infrastructure-as-code in AWS (e.g., Terraform, Docker, CI/CD pipelines)
- Product-oriented problem solver with a focus on delivering practical, user-driven solutions
- Background or interest in financial systems such as trading, brokerage, or crypto exchanges

Working Location: Singapore (remote work) / relocation to USA
