募集要項

Company overview:

We are actively looking for a **Cloud Engineer** who can handle cloud infrastructures to work with a trailblazing - **internationally recognized** company in **space technology**.

- They are aiming to **revolutionize the space industry**.
- Are passionate about protecting the earth's orbital environment.
- Trusted by **commercial & governmental** organizations.

Who you are:

- An experienced engineer in designing and implementing cloud infrastructure.
- Someone who can tackle multiple cloud projects hands-on.
- Flexible, adaptable, and reliable.

Why you should apply:

- Expand your technical horizons in a groundbreaking industry.
- Directly contribute to the development of security & technology beyond our planet.
- Exposure to international stakeholders in both the public and private sectors.
- Work with a diverse team in a fast-paced, fun, and supportive environment.
- Contribute to pioneering space missions with partners from the US, UK, and Europe.

スキル・資格

Requirements:

- 3+ years of experience in system construction & cloud infrastructure (AWS, GCP, Linux, Microsoft Systems).
- Strong problem solving & communication skills to handle external partners and IT vendors.

Desirable:

- A good grasp of serverless technologies, containers, and microservices.
- Certified in public cloud systems.
- Understand the technicalities and best practices behind cloud security
