募集要項

The role of Data Engineer involves designing, building, and maintaining robust data pipelines and systems that support business decision-making. This position is ideal for someone with expertise in data engineering and a passion for working in the business services industry.

Client Details

This opportunity is with a medium-sized company operating in the business services sector. The organization has a focus on technology and innovation, providing an engaging work environment for professionals seeking to contribute to impactful projects.

Description

- Develop, test, and maintain scalable data pipelines for processing large datasets.
- Collaborate with cross-functional teams to identify data requirements and implement solutions.
- Optimize and enhance data systems for improved performance and reliability.

- Ensure data security and compliance with relevant regulations.
- Implement data transformation and integration processes to support analytics and reporting.
- Monitor and troubleshoot data pipelines to address any issues proactively.
- Document technical processes and provide support to stakeholders as needed.
- Contribute to the adoption of best practices in data engineering and technology.

Job Offer

- Competitive hourly salary estimated between 1300 JPY and 1600 JPY.
- Opportunity to work on impactful projects in the business services industry.
- Temporary role with potential for skill enhancement and career growth.
- A supportive and innovative work environment in the technology department.
- Access to company benefits, subject to eligibility.

If you are ready to bring your data engineering expertise to the table, apply today to join a forward-thinking team in an exciting location!

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Chloe Wu on +81 3 6832 8653

スキル・資格

A successful Data Engineer should have:

- A strong background in data engineering, including proficiency in relevant tools and technologies.
- Experience in building and maintaining data pipelines and ETL workflows.
- Knowledge of database systems, cloud platforms, and programming languages such as Python or SQL.
- Familiarity with data modeling and data architecture principles.
- An ability to work collaboratively with technical and non-technical teams.
- A proactive approach to problem-solving and process optimization.

会社説明

My client is a world class HR agency, they provide the best HR/Payroll solutions to their client.
