募集要項

We are seeking a highly motivated and experienced **IT Business Process Analyst** to join our client's team in Japan. This critical role involves close collaboration with global IT experts to implement, maintain, and expand company-wide application standards within the Japanese market. The primary focus is on driving business efficiency by analyzing core user operations and translating complex needs into effective IT solutions.

Key Objectives:

- **Implement, maintain, and extend global IT application standards** within the Japanese business unit.

- **Improve business applications** and significantly **increase the efficiency of user operations** across the organization.

Core Responsibilities:

- **ERP Project Leadership:** Play a key business process analyst role in upcoming ERP projects (e.g., potential SAP S/4HANA initiatives).

- **Process Analysis & Improvement:** Conduct deep-dive analysis into core user business operations to identify pain points and propose and implement robust IT solutions.

- **Global Collaboration:** Partner with the global Production Support team to maintain and enhance the existing global ERP to ensure smooth business continuity in Japan.

- **Translation & Communication:** Serve as the crucial link by accurately **translating business language into system language** and vice versa.

- **Project Management:** Ensure clear communication and use an Agile approach to prioritize tasks and manage expectations for system changes and operational impacts (e.g., e-commerce, B2B portal integrations).

- **Compliance:** Support process controlling activities to adhere to audit criteria.

スキル・資格

Candidates **must** meet the following non-negotiable requirements to be considered for this position:

Required Technical and Project Experience:

- **ERP Implementation:5+ years** of experience in an **ERP implementation project**, including participation in a **Global template** implementation.

- **Mandatory SAP Skill:SAP ECC or R/3 experience is mandatory.** (SAP S/4HANA experience is a plus, not a requirement).

- **Functional Expertise:Proven SAP Implementation experience in the Logistics area (SD/MM/PP).**

- **Business Process:** Extensive working experience in the **OTC (Order To Cash)** process.

- **Upstream Skills:** Proven experience in **upstream ERP processes**, including business requirement definition, **Fit & Gap analysis**, customization, and add-on basic design.

- **Project Experience:** Proven working experience leading or substantially contributing to a **middle-sized business application project**.

Required Education and Language:

- **Education:** Bachelor's degree or equivalent.

- **Japanese:Native Level or Advance Business Level.**

- **Global Communication:English: Advance business level** for conducting conferences, presentations, and negotiations with global stakeholders.
