### 募集要項

Our client a digital engineering hub focused on building advanced technology solutions that power large-scale digital transformation. Their teams specialize in cloud architecture, AI, data engineering, blockchain, and system security—creating scalable platforms that enhance business performance and operational efficiency.

Our client is seeking a talented **Data Scientist** to design and deploy AI-driven solutions that power data-informed decision-making. In this role, you'll build scalable data pipelines, develop predictive models, and collaborate with cross-functional teams to integrate analytics and machine learning into business operations. You'll also champion best practices in data quality, governance, and ethical AI.

## Key Responsibilities

- Design, develop, and maintain data pipelines for structured and unstructured data sources.
- Work with engineering and business teams to identify and prioritize data use cases.
- Build, validate, and deploy predictive and machine learning models at scale.
- Conduct exploratory data analysis and translate findings into actionable insights.
- Ensure data quality, integrity, and governance across systems and platforms.
- Implement scalable solutions using cloud-based and big data technologies.
- Monitor model performance and perform retraining to maintain accuracy.
- Document data workflows, modeling approaches, and technical decisions.
- Promote responsible AI practices and support data security and compliance initiatives.

---

## スキル・資格

### Qualifications:

- At least **4 years of professional experience in AI system development**, including the design, implementation, and deployment of **AI-driven solutions** addressing real-world business challenges
- Proficiency in **Python** or **Rust**
- Hands-on experience with **Git** for version control
- Familiarity with **Docker** for containerization
- Experience working with **cloud platforms** (preferably **Microsoft Azure**)
- Practical experience with **Large Language Models (LLMs)** and **Agentic AI systems**
- Experience deploying and managing **MCP (Model Control Plane)** servers or similar **AI infrastructure**
- Ability to manage both **development** and **maintenance** tasks effectively
- Strong **problem-solving skills** and adaptability in dynamic environments
- Excellent **communication** and **collaboration** skills across cross-functional teams
- **Fluent Japanese** (JLPT N1 or above) and **business level English** (TOEIC 800+)
