### 募集要項

- Define and own the product vision, strategy, and roadmap, aligning with business goals and customer needs.
- Act as the primary liaison between business stakeholders and technical teams, ensuring clear communication and alignment.
- Manage the product backlog, prioritize features, write user stories with clear acceptance criteria, and define functional &

non-functional requirements.

- Conduct market research, gather requirements, and analyze customer feedback to drive product improvements.
- Collaborate with engineering, UI/UX, project management teams and QA teams to ensure timely and high-quality feature delivery.
- Define and track KPIs to measure product success and make data-driven decisions.
- Balance scope, time, and resources to deliver valuable solutions while addressing technical feasibility.
- Ensure alignment between business goals and technical implementation.
- Proactively communicate during troubleshooting (on-call).
- Be the domain expert in eco-system loyalty programs and be able to recommend improvement solutions.
- Be both quantitative and qualitative, and able to quickly understand and assess complex issues in order to take the right decision.
- Be a role model to the team members when it comes to ownership, proactivity and taking responsibility.

---

## スキル・資格

- 5+ years experience in web system development.
- Familiarity with Software Development Lifecycle (SDLC) and Agile methodologies (e.g., Scrum, Kanban).
- Experience in KPI-driven service development.
- Experience writing requirement specifications & acceptance criteria.
- Strong analytical and problem-solving skills.
- Understanding of the technical stacks, system architecture, and API to define feasible product requirements.
- Use storytelling to convey the value of technical features to non-technical audiences.
- Mediate conflicts between stakeholders with differing priorities and find balanced solutions.
- Motivate and inspire cross-functional teams to achieve common goals without direct authority.
