募集要項

«Job Description & Position Highlights»

- Responsibilities include designing, developing, and implementing image recognition processing for AI software detecting risky behaviors.
- Gain advanced development experience integrating AI technology with web application development using C++ and OpenCV.
- Enhance specialized knowledge and project execution skills through technical documentation and team collaboration.
- Based in Tachikawa, gain hands-on experience with cutting-edge AI technology while building practical image recognition solution development skills.

[Job Responsibilities]

- Engage in the full lifecycle of AI software development specifically for risk behavior detection systems.
- Utilize C++ programming language for development tasks.
- Implement AI image recognition techniques, including the use of OpenCV, for feature extraction and analysis.
- Develop web applications to support the risk behaviour detection system.
- Create comprehensive technical documentation, including design documents and specifications.
- Maintain effective communication with team members and stakeholders throughout the development process.

[Employment Type]

Full-time, Permanent Employee

[Salary]

4-6M JPY

[Working Hours]

In accordance with company regulations

[Work Location]

Tachikawa Head Office, Japan

[Holidays & Leave]

In accordance with company regulations

[Benefits & Welfare]

In accordance with company regulations

スキル・資格

Qualifications**[Required]**

- Japanese Level – N3 and above
- Strong proficiency in C++.
- Proven experience in AI and image recognition techniques.
- Hands-on experience with image processing libraries such as OpenCV.
- Solid understanding and experience in web application development.
- Ability to create clear and concise technical documentation (e.g., design documents).
- Excellent communication skills.

[Preferred Experience]

- Familiarity with Linux operating systems.
- Knowledge of Generated AI concepts and applications
