募集要項

Design and implement scalable data solutions for complex business needs. Collaborate with teams to deliver robust, high-performance data pipelines.

Client Details

A leading global technology and business transformation partner, trusted for over five decades to deliver end-to-end solutions across strategy, design, engineering, and AI-driven innovation. The organisation is committed to building a sustainable and inclusive future while empowering employees to shape their careers.

Description

- Collaborate with stakeholders to gather and analyse requirements.
- Design and implement scalable data pipelines using Scala, Spark, and Java.
- Develop reusable frameworks for data ingestion, validation, and transformation.
- Automate testing, CI/CD processes, and data migration scripts.
- Provide technical support for incident recovery and troubleshooting.

Job Offer

- Competitive salary ranging from 7M~ JPY
- Work with advanced technologies including AI, cloud, and big data.
- Global exposure and collaborative work environment.
- Continuous learning and career development opportunities.
- Chance to work in a fast-paced and technology-driven environment in Tokyo.

If you are passionate about data engineering and eager to contribute to innovative projects in Tokyo, we encourage you to apply.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Krisztina Szokolai on +81366276101.

スキル・資格

- 3-6 years of experience as a developer or data engineer.
- Strong programming skills in Scala, Java, or Python.
- Expertise in distributed systems (Hadoop, Spark) and optimisation techniques.
- Experience with public cloud platforms, preferably Azure.
- Solid knowledge of Oracle, MS-SQL Server, Linux, networking.
- Proficient in SQL, shell scripting, Git, and CI/CD tools.
- Preferred: Experience with REST APIs, NoSQL, microservices, ETL, streaming data, BI tools.
