募集要項

Company Overview

A company is hiring for an IT Delivery Lead (EUC Development and Testing/Migration Support). The organisation is engaged in a major core system replacement project for a Japanese financial institution based in London. You will join a global environment where London and Japan collaborate closely on high-impact system transformation initiatives, with future opportunities to contribute to projects in additional international offices.

Job Description

- Support the design, development, and modification of EUC tools such as Excel, Access, and SQL in collaboration with the primary EUC development lead.
- Participate in the development lifecycle from design through testing for EUC-related deliverables.
- Act as the main liaison between the London office and the Japan DataHub team, consolidating Q&A, inquiries, and

support requests.

- Organise, triage, and delegate queries to appropriate stakeholders while monitoring progress.
- Contribute to the testing and migration phases by facilitating smooth communication and ensuring alignment across geographically distributed teams.
- Support long-term global initiatives, including future system replacement projects planned for other international locations.

Qualifications

- Extensive experience developing and modifying applications using Excel/Access VBA, including analysing, refactoring, and debugging existing macros.
- Experience implementing data import and export logic integrating external files and databases.
- Practical experience in database operations and SQL query creation, including SELECT, INSERT, UPDATE, and DELETE batch processes.
- Experience across the system development lifecycle, from design to testing.
- Experience coordinating with business users on specification adjustments, issue management, and progress reporting.
- Background in bridging communication across different teams or locations.
- Fundamental knowledge of networks, databases, and servers.
- Ability to work autonomously and collaboratively, maintaining flexibility and perseverance in high-pressure environments.
- Strong organisational skills for structuring complex inquiries and conveying key points clearly.
- Business-level fluency in both Japanese and English.
- Preferred: Experience in Japanese corporate environments or understanding of Japanese business culture.
- Preferred: Knowledge of banking or securities operations.
- Preferred: Experience with BI tools such as Power BI or Tableau.
- Preferred: Knowledge of SSIS or data integration middleware.
