募集要項

Join a global team dedicated to transforming bold ideas into real-world impact. Collaborate with talented professionals around the world to help organizations rethink how they leverage technology to drive growth, spark innovation, and build a more sustainable future. From shaping strategic direction to designing and engineering advanced solutions in AI, cloud, and data, you'll play a key role in delivering meaningful projects that generate lasting value for businesses, communities, and your own professional journey.

Key Responsibilities:

- Design, deploy, and manage scalable, secure environments on Google Cloud Platform (GCP).

- Automate infrastructure provisioning and management using Infrastructure as Code (IaC) and scripting.

- Oversee monitoring, cost optimization, and security best practices.

- Diagnose complex technical issues and provide expert guidance and support.

スキル・資格

- Japanese/English bilingual fluency.

- In depth knowledge of core GCP services - compute engine, storage, Cloud functions, networking, IAM.

- Strong experience in Terraform/ ansible (IaC).

- Solid understanding of TCP/IP, DNS, Load balancing, VPCs and network security.

  Key Technologies:

- GCP Foundation: Deep, practical experience in designing and implementing GCP landing zones and organizational structures based on the Google Cloud Adoption Framework.

- GCP Networking: Advanced knowledge of VPC design, Shared VPCs, hybrid connectivity (Interconnect, VPN), and load balancing.

- GCP Security: Expertise in implementing security best practices, including IAM, resource policies, and network security controls.

- Infrastructure as Code: Strong proficiency in Terraform for automating the deployment of GCP infrastructure.
