募集要項

This role designs and delivers high-quality, scalable Java backend services while driving architecture decisions for high-traffic systems. It also leads end-to-end feature development and guides engineering teams through complex technical challenges.

Client Details

The company is a large organization within the Technology & Telecoms industry, offering cutting-edge solutions and services. They are known for their professional environment and focus on delivering innovative technologies.

Description

- Design and deliver high-quality, scalable Java backend services that meet business priorities under tight timelines.
- Lead architecture design for high-traffic web systems, ensuring long-term scalability and maintainability.
- Drive end-to-end development of new backend features, including design, implementation, testing, and release.
- Provide technical leadership by guiding engineering teams and resolving complex backend challenges.

Job Offer

- Experience in a professional and well-established organization.
- Be part of big project

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

スキル・資格

- Proficiency in Java programming and related frameworks.
- Strong problem-solving and analytical skills.
- Experience in developing and deploying robust applications.
- Ability to work effectively within a team environment.

会社説明

The company is a large organization within the Technology & Telecoms industry, offering cutting-edge solutions and services. They are known for their professional environment and focus on delivering innovative technologies.
