募集要項

Overview

- Manage and improve system monitoring and alerting environments using tools such as Kibana / ELK stack
- Build and maintain Kubernetes-based infrastructure and support production environments
- Drive automation and CI/CD improvements using tools such as Jenkins, Terraform, Ansible
- Troubleshoot production issues and improve system reliability, performance, and latency

Why Should You Apply

- Work with an international engineering team in a global tech company
- Opportunity to work on large-scale consumer platforms handling high transaction volumes
- Contract role (3-month rolling) – 4,400–4,700 JPY/hour (~660K–705K monthly + OT)
- Chance to become a permanent employee

Responsibilities:

- Manage monitoring and alert handling tools
 - Construct a new monitoring environment for each product
 - Improvement of service performance and latency
 - Operation & maintenance support
 - Production support (on-call)
 - Troubleshooting of service in the trouble
-

スキル・資格

Required skills:

- More than three years of SRE experience
 - Knowledge of modern monitoring tools knowledge
 - Experience in constructing and managing a monitoring environment like Kibana ELK stack
 - Proficiency in one or more of the following: Go, Python, C, C++, Java, Rust, Perl, Ruby or shell script
 - Experience in constructing and managing k8s environment
 - Experience with UNIX operating systems internals and/or network
 - Experience with CI/CD tools (ex. Jenkins, CircleCI)
 - Experience in automation and configuration management using Chef, Ansible, Terraform
-
