募集要項

The role is responsible for ensuring the accuracy, integrity, and performance of complex ETL pipelines and data warehouse environments through rigorous testing, SQL-based validation, and end-to-end data quality checks. It also involves working with modern data platforms and ETL tools while contributing to automation, performance testing, and CI/CD-driven data quality processes.

Client Details

Our client is a leading global provider of data-driven marketing solutions, specializing in personalized consumer engagement across retail and digital ecosystems. With a strong presence in Japan, the organization leverages large-scale transaction data, advanced analytics, and innovative technology to help brands deliver targeted, measurable customer experiences that drive business growth.

Description

- Perform end-to-end testing of ETL pipelines, validating data completeness, accuracy, integrity, and schema alignment

across multiple data sources and platforms.
- Develop test plans, strategies, and detailed test cases for data migrations, data warehousing processes, and large-scale data quality initiatives.
- Write and execute complex SQL queries to perform source-to-target reconciliation and troubleshoot data discrepancies in heterogeneous database environments.
- Collaborate with data engineers and analysts to support performance testing, optimize data workflows, and contribute to automation and CI/CD-driven data quality improvements.

Job Offer

- Opportunity to work almost fully remote, offering great flexibility.
- Chance to work in the heart of Minato-ku with a large organization.

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serina Miyazono on +81 3 6627 6130.

スキル・資格

- Brings 4+ years of hands-on experience in ETL/Data testing, with strong mastery of SQL for complex validation and data reconciliation tasks.
- Demonstrates solid understanding of data warehousing concepts, ETL/ELT workflows, and testing methodologies across modern cloud and on-premise data platforms.
- Able to collaborate effectively with technical teams, proactively troubleshoot data issues, and contribute to performance testing and automation initiatives.
- Possesses conversational-level Japanese and strong communication skills to coordinate with local stakeholders and global teams in a hybrid environment.
