募集要項

Job Description

Location: Nagoya, Japan (Hybrid options may apply)

Experience: 10+ Years

Industry: Automotive / Manufacturing / Aerospace

Employment Type: Full-time

About the Role

We are looking for a visionary **Teamcenter Solution Architect** with over 10 years of experience to spearhead the architecture and delivery of large-scale Product Lifecycle Management (PLM) implementations.

As a key leader in our global programs, you will bridge the gap between complex business requirements and high-performance technical solutions. You will serve as the **Design Authority**, ensuring that our Teamcenter ecosystem is scalable, efficient, and perfectly aligned with industry "fit-to-standard" practices.

Key Responsibilities

- **Architectural Leadership:** Own the end-to-end Teamcenter solution architecture, including application, data, and integration layers for specific solution areas.

- **Process Design & Governance:** Design and govern core PLM processes, including **EBOM, MBOM, BOP, and Change Management**, ensuring seamless data flow across the product lifecycle.

- **Technical Oversight:** Lead and review Teamcenter configurations and customizations, specifically focusing on **BMIDE, ITK, and Active Workspace (AWC)**.

- **Systems Integration:** Define and oversee critical integrations with **CAD, ERP**, and manage complex **Data Migration** strategies.

- **Stakeholder Management:** Act as the primary technical point of contact for project managers, PMO, and executive-level client stakeholders.

- **Implementation Lifecycle:** Drive the "Design, Build, Test, and Deploy" phases, ensuring the highest quality standards are met throughout the program.

スキル・資格

Required Skills & Experience

- **Expertise:** 10+ years of hands-on experience in Teamcenter PLM implementations within large-scale, global environments.

- **Technical Depth:** Extensive knowledge of the Teamcenter data model, advanced workflows, and configuration.

- **Tools:** Proven experience with **BMIDE, ITK, AWC, and T4S/T4O**.

- **Program Experience:** History of working in multi-site, global PLM programs with a deep understanding of cross-functional team collaboration.

- **Communication:** Professional-level English communication and stakeholder management skills are essential.

Preferred Qualifications

- **Certifications:** Siemens Teamcenter Certification is highly desirable.

- **Industry Knowledge:** Previous experience in the **Aerospace, Automotive, or General Manufacturing** sectors.

- **Language:** While English is the primary language, **Japanese language proficiency** (JLPT N2 or above) is a significant advantage for local collaboration.

Why Join Us?

- Opportunity to lead digital transformation for world-class manufacturing leaders.

- A collaborative, international work environment in the heart of Japan's industrial hub (Nagoya).

- Competitive compensation package and career growth paths in PLM Consulting and Architecture.
