募集要項

This senior role focuses on leading design and development for a large-scale order management platform supporting high-volume e-commerce operations. You will contribute to system re-architecture, cloud migration, and new feature delivery across backend and web applications.

Client Details

A major technology-driven e-commerce group operating one of Japan's largest online marketplace ecosystems. The engineering division develops and maintains high-transaction systems and is expanding its global team to strengthen next-generation platform capabilities.

Description

- Design, propose, and implement new features aligned with business requirements
- Improve, refactor, and maintain existing functionalities
- Participate in architectural planning and technical discussions
- Mentor junior engineers as needed
- Support system inquiries, troubleshooting, and post-release operations
- Work within an Agile/Scrum environment and actively contribute to team practices

Job Offer

- Opportunity to drive design and architecture in a large-scale e-commerce platform
- International, diverse engineering environment
- Growth opportunities and exposure to cloud transformation initiatives
- Meaningful impact on systems used by millions of users

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

スキル・資格

Core Fundamentals

- Strong understanding of IT fundamentals and professional software development practices
- Solid analytical skills and commitment to writing clean, efficient code
- Knowledge of web security and personal data protection
- Experience with high-transaction, mission-critical systems
- Post-development system operation and maintenance experience

Application Development
- 5+ years of hands-on C# development experience, especially WebAPI and SOLID principles
- Backend expertise with MVC.NET, .NET Framework or .NET Core
- Experience with .NET 6 or higher
- Working knowledge of JavaScript/HTML/CSS and REST
- Experience with Vue.js or another modern JavaScript framework (plus)
- Cloud design, development, and deployment experience

Database Skills
- Experience with Entity Framework, Dapper, or similar ORM frameworks
- Strong T-SQL skills with Microsoft SQL Server

Soft Skills
- Collaborative, proactive team player
- Strong communication skills
- Ability to mentor and coach others
- Agile mindset and ability to think creatively

Nice to Have
- Experience with CI/CD tools (TeamCity, Octopus, Jenkins, Kubernetes, Docker, GitHub Actions)
- Knowledge of messaging systems (Service Bus, RabbitMQ, etc.) and frameworks (Rebus, NServiceBus, MassTransit)
- Experience with microservices architecture
- Experience with MariaDB or MySQL
- Experience with Kafka or other data streaming technologies
- Experience in Scrum environments or Scrum Master experience
- Experience working in multicultural teams
