#### 現在のビザ

日本での就労許可が必要です

#### 募集要項

This role focuses on building and evolving backend microservices for large-scale e-commerce platforms. You will take ownership of core systems that support customer rewards, order delivery logic, and high-volume transactions.

#### Client Details

Our client is a large, technology-driven organization operating major e-commerce platforms with significant traffic and data volumes. The environment is international, engineering-led, and focused on building reliable, high-performance systems that directly support business growth.

#### Description

- Design, develop, and maintain backend microservices using Java (JDK11+)
- Build scalable, high-performance systems handling large volumes of traffic and data
- Contribute new features and services that enhance customer value
- Collaborate closely with platform and framework teams to improve overall engineering productivity
- Promote a culture of quality, innovation, and customer-focused development
- Take strong ownership of the systems you build, from design through operation

**Job Offer**

- Exposure to large-scale, high-traffic e-commerce systems
- English-speaking environment with no Japanese language requirement
- Professional, collaborative engineering culture

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

---

**スキル・資格**

- 5+ years of hands-on experience with Java (JDK11 or above)
- Experience with modern Java frameworks (e.g., Spring or micro-frameworks)
- Experience with both relational and NoSQL databases (e.g., Couchbase, CockroachDB, TiDB, or similar)
- Practical experience with event-driven architectures (Kafka, Confluent Kafka, Apache Pulsar, etc.)
- Experience using containers and cloud platforms
- Working knowledge of CI/CD pipelines and DevOps practices
- Experience using source control systems, ideally Git

**Nice to have:**

- Experience working in Agile/Scrum development environments
  - Strong understanding of SDLC best practices, including code reviews and testing
  - Experience designing high-availability architectures
  - Knowledge of APM tools and performance tuning
  - Familiarity with reactive programming and gRPC
  - Administration experience with NoSQL databases or message brokers
-
