Data Platform Engineer

募集職種

人材紹介会社
ハイテックジャパン株式会社

求人ID
1601118

業種
ITコンサルティング

会社の種類
大手企業 (300名を超える従業員数) - 外資系企業

雇用形態
正社員

勤務地
東京都 23区

給与
900万円 ~ 1400万円

更新日
2026年11月11日 02:00

応募必要条件

職務経験
6年以上

キャリアレベル
中途経験者レベル

英語レベル
日常会話レベル

日本語レベル
流暢レベル

最終学歴
短大卒： 準学士号

現在のビザ
日本での就労許可が必要です

募集要項

About the Opportunity

Join a global technology organization delivering enterprise-scale cloud and data transformation solutions for international clients. As a **Data Platform Engineer**, you will design, build, and optimize modern cloud-native data platforms that enable advanced analytics, artificial intelligence (AI), machine learning (ML), and business intelligence (BI).

You will work with cross-functional teams across multiple regions to develop secure, scalable, and high-performance data solutions using leading cloud technologies and modern data engineering practices.

Key Responsibilities

- Design, develop, and maintain enterprise data platforms in cloud and hybrid environments.
- Build scalable ETL/ELT pipelines to ingest, transform, and process structured, semi-structured, and unstructured data.
- Develop and optimize data lakes, data warehouses, and lakehouse architectures.

- Implement data integration solutions across enterprise applications and third-party systems.
- Ensure data quality, governance, lineage, metadata management, and security compliance.
- Optimize database performance, query execution, and storage efficiency.
- Deploy and manage cloud-based analytics platforms.
- Automate infrastructure provisioning using Infrastructure as Code (IaC).
- Implement CI/CD pipelines for data engineering workflows.
- Monitor platform health, troubleshoot production issues, and ensure high availability.
- Collaborate with Data Scientists, BI Developers, Software Engineers, Cloud Engineers, and business stakeholders.
- Support enterprise cloud migration and modernization initiatives.
- Follow Agile/Scrum delivery methodologies and DevOps best practices.

Required Qualifications

- Bachelor's degree in Computer Science, Information Technology, Engineering, or a related discipline.
- 4–10+ years of experience in Data Engineering, Data Platform Engineering, or Cloud Data Engineering.
- Strong proficiency in SQL and relational database concepts.
- Hands-on experience with Python or Scala.
- Experience designing and developing enterprise ETL/ELT pipelines.
- Strong understanding of data modeling, dimensional modeling, and data architecture.
- Experience working in Agile development environments.

スキル・資格

Data Platform Engineer, Cloud Data Engineer, Data Engineer, Azure Data Engineer, AWS Data Engineer, GCP Data Engineer, Databricks, Snowflake, Microsoft Fabric, Azure Synapse, Spark, SQL, Python, ETL, ELT, Data Warehouse, Data Lake, Lakehouse, Apache Airflow, Kafka, Kubernetes, Docker, Terraform, CI/CD, DevOps, DataOps, Big Data, Analytics Engineer, Permanent, Global Technology Company.
