募集要項

Join a leading e-commerce platform team in Tokyo to design and lead backend systems at massive scale. You will act as a senior technical leader, driving architecture, delivery, and operational excellence across high-traffic services.

Client Details

Our client is a major internet services company operating one of Japan's largest online marketplaces, serving tens of millions of users. The organization is known for running high-impact campaigns and continuously optimizing performance at scale.

Description

- Lead backend architecture design for large-scale, high-traffic web systems
- Translate business priorities into high-quality, timely system delivery
- Own end-to-end development lifecycle: design, implementation, testing, and release
- Drive technical decisions in complex, high-load environments
- Lead projects or teams as a senior engineer, ensuring best practices and delivery excellence
- Optimize backend systems for peak events and large traffic spikes
- Oversee service monitoring, incident response, and production troubleshooting
- Implement continuous improvement cycles (hypothesis → validation → analysis → systemization)

- Collaborate with cross-functional teams to enhance user-facing features
- Handle operational tasks including investigation and stakeholder inquiries

Job Offer

- Opportunity to lead backend architecture for a top-tier e-commerce platform
- Exposure to large-scale, high-traffic systems and complex challenges
- Collaborative, innovation-driven engineering culture

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

スキル・資格

- 5+ years of technical leadership in high-load web system architecture and decision-making
- Proven experience designing scalable, maintainable systems with long-term growth in mind
- Strong background in Java and Spring Boot (5+ years)
- Extensive experience with REST API design and development
- Solid understanding of unit testing (JUnit) and code review practices
- Experience with relational databases (Oracle or MySQL)
- Familiarity with application servers (Tomcat or WebLogic)
- Strong command of Linux, Git, and Gradle
- Experience with CI/CD tools (e.g., Jenkins)
- Hands-on experience with container technologies such as Docker and Kubernetes
- Proven experience in production monitoring, incident handling, and reporting
- Business-level English communication skills

Preferred Skills:

- Experience with performance, load, and stress testing
- Familiarity with Redis, Kafka, Elasticsearch, Grafana, Kibana
- PHP development experience using frameworks (3+ years)
- Kubernetes environment setup and certifications (CKA/CKAD preferred)

会社説明

Our client is a major internet services company operating one of Japan's largest online marketplaces, serving tens of millions of users. The organization is known for running high-impact campaigns and continuously optimizing performance at scale.
