大学卒： 学士号

現在のビザ
日本での就労許可が必要です

募集要項

Join a high-impact data platform team to design and build robust APIs enabling large-scale data movement across distributed systems. You'll help drive reliable, high-availability data orchestration supporting a global digital ecosystem.

Client Details

Our client is a large, global technology company operating across e-commerce, digital services, and fintech. With a diverse international workforce, they build scalable platforms that serve a vast global user base.

Description

- Develop and maintain Python-based APIs supporting large-scale data transfer services
- Build API integrations for distributed storage platforms (e.g., cloud storage and streaming systems)
- Enhance system reliability, scalability, and high-availability architecture
- Collaborate with cross-functional teams to design efficient data workflows
- Contribute to CI/CD pipelines and adopt DevOps best practices
- Ensure code quality through reviews, testing, and adherence to engineering standards
- Support ongoing improvements to internal data infrastructure and developer experience

Job Offer

- Opportunity to work on mission-critical data infrastructure
- Exposure to global-scale systems and modern cloud technologies
- Collaborative, international engineering environment

To apply online please click the 'Apply' button below. For a confidential discussion about this role please contact Serena Wu on +81 3 6627 6137.

スキル・資格

- 5+ years of experience in Python development
- Strong hands-on experience with Django and Django REST Framework (DRF)
- Solid Linux environment experience
- Understanding of software development lifecycle best practices (testing, reviews, coding standards)
- Experience with version control tools such as Git
- Knowledge of CI/CD pipelines and DevOps practices
- Business-level English proficiency

Preferred Qualifications:

- Experience working in Agile/Scrum environments
 - Familiarity with high-availability system design
 - Knowledge of distributed storage (e.g., Hadoop, GCS, S3)
 - Experience with streaming/messaging systems (Kafka, Pulsar)
 - Monitoring experience (Grafana, Prometheus)
 - Exposure to Java or Go
 - Experience with containerization technologies (Kubernetes, GKE)
-
