募集要項

Position Overview

As a Backend Engineer, you will design, develop, and operate **Cloud** and our next-generation energy software platform.

You will collaborate with an international engineering team where English is the primary working language. Japanese language proficiency is **not required**.

Responsibilities

- Design, develop, and maintain Cloud and related products
- Participate in the full software development lifecycle, including requirements gathering, architecture, implementation, testing, and deployment
- Improve existing systems through performance optimization and technical debt reduction
- Design scalable and reliable backend architectures
- Build, operate, and optimize cloud infrastructure on Microsoft Azure
- Improve development workflows through automation and engineering best practices
- Conduct code reviews and provide technical support to teammates

スキル・資格

Required Qualifications

- Professional experience developing web applications using **C# and ASP.NET Core**
- Experience designing and implementing REST APIs
- Experience working with relational databases such as SQL Server
- Experience designing databases using Entity Framework Core or similar ORM frameworks
- Solid understanding of object-oriented programming and software design patterns
- Experience developing applications on cloud platforms such as Microsoft Azure
- Experience writing automated tests
- Experience working in Agile development environments
- Strong English communication skills for collaborating within an engineering team
- **Japanese language skills are not required**

Preferred Qualifications

- Experience designing and managing Microsoft Azure infrastructure
- Experience using Azure DevOps
- Knowledge of Domain-Driven Design (DDD), Clean Architecture, or CQRS
- Frontend development experience using React or similar frameworks
- Ability to independently research technical documentation written in English

Ideal Candidate

We are looking for someone who:

- Is passionate about transforming the energy industry through technology
- Enjoys tackling new challenges and exploring unfamiliar domains
- Takes ownership of problems and proactively drives solutions
- Thrives in a fast-paced startup environment
- Values collaboration, continuous learning, and engineering excellence

Technology Stack

Backend

- C#
- ASP.NET Core
- Entity Framework Core
- REST API
- xUnit

Frontend

- TypeScript
- React
- Vite
- Vitest
- React Testing Library

Cloud & Infrastructure

- Microsoft Azure
- Azure SQL Database
- Azure DevOps

Development Tools

- GitHub Enterprise
- Visual Studio 2026
- Microsoft Teams
