At Insmed every moment and every patient counts - and so does every person who joins in. As a global biopharmaceutical company dedicated to transforming the lives of patients with serious and rare diseases you'll be part of a community that prioritizes the human experience celebrates curiosity and values every person's contributions to meaningful progress. That commitment has earned us recognition as Science magazine's No. 1 Top Employer for five consecutive years certification as a Great Place to WorkR in the U.S. and a place on The Sunday Times Best Places to Work list in the UK.

For patients for each other and for the future of science we're in. Are you •

About the Role

The Senior Manager Business Applications (Japan) is responsible for end to end solution design implementation and deployment of Insmmed's Japan Business Applications portfolio. We are looking for a driven results oriented leader to lead the effort in building Insmmed's next generation of systems used to automate and optimize our critical Japan business applications and processes. Our ideal candidate thrives in a fast paced environment and enjoys working for a global organization of highly complex business scenarios. The successful candidate will be a passionate builder of talent and teams.

What You'll Do

- Provides system support to the business ensuring accurate and timely processing of all Japan Business applications including (Oracle Supply Chain and Financial applications) .
- Provides support to the Japan Supply Chain and Finance user community to improve the efficiency of the group through features and functions available in Oracle ERP Cloud.
- Challenges existing methods processes and tools to optimize utilization and efficiency of Oracle ERP Cloud and associated integrations.
- Provides user training and assistance as needed.
- Supports the integration of acquisitions. This support may include mapping data data conversions system configuration and business process revisions.
- Plays a key role in the integration of new requirements solution architecture and process improvements into the system and process flow including the evaluation and introduction of additional technology to meet business requirements.
- Coordinates with stakeholders to evaluate and make changes to Oracle ERP Cloud systems to maintain compliance with corporate standards while balancing global vs local needs.
- Assists with the planning and implementation of business systems changes because of significant organizational structure changes to support business growth.
- Performs as team lead and strategic business partner on Japan business systems projects upgrades and/or integration of new applications.
- Assists with business process improvement initiatives.
- Ensure reliable technology and process methods are in place to provide accurate results and consistent system performance.
- Drive continuous improvement best practices and improving standard operating procedures for the organization.
- Lead onshore/offshore team to manage requirements design configuration and testing for multiple IT initiatives.
- Provides governance over quality of delivered services.

Support activities related to Internal External audit SOX GDPR etc. compliance.
