募集要項

Company Overview:

Our client is a F&B supply chain ecommerce platform. They are looking for software engineer for the implementation and enhancement of their supply chain system.

Job Description:

- Convert product requirements into technical designs and scalable solutions.
- Automate supply chain processes, including demand forecasting, purchase order generation, and batch processing.
- Build data pipelines and analytics for SKU-level margin, inventory, and waste tracking.
- Deliver e-commerce enhancements based on inventory and profitability insights.

- Design data models and operational dashboards for supply chain management.
- Develop analytical SQL and reporting solutions to support business performance measurement.
- Assess technical trade-offs and recommend cost-effective approaches.
- Own production support, monitoring, and continuous improvement of delivered solutions.
- Support the modernization journey from PHP to TypeScript.

Job Requirements:

- More than 3 years of experience building and maintaining web applications in production.
- Strong SQL skills, including joins, aggregations, and analytical queries.
- Experience with AWS services (ECS, RDS, Lambda) and Infrastructure as Code tools such as AWS CDK or Terraform.
- Experience working with multi-service systems, including web applications, background jobs, queues, and external APIs.
- Ability to build and maintain reliable scheduled batch processes.
- Experience using AI coding tools to accelerate software development (e.g., Claude Code).
- Comfortable working from existing requirements and challenging unclear, inconsistent, or overly costly solutions when needed.
