スキル・資格

【Required Skills】

- Proven experience in Automotive HMI/IVI system development and functional ownership across full lifecycle (concept to validation).
- Strong understanding of system requirements engineering, including creation,decomposition, and bidirectional traceability (e.g., DOORS/Polarion).
- Solid knowledge of Automotive software development processes (V-cycle/Agile) and ASPICE compliance.
- Experience with Android Automotive / Linux-based IVI platforms, including application integration and UI/UX behavior.
- Ability to define and track function maturity plans, milestones, and KPIs (performance, latency, user experience). Hands-on experience in test strategy definition, validation methodologies (SIL/HIL/vehicle testing), and test reviews.
- Strong experience in defect management, root cause analysis, and change request (CR) handling using tools like JIRA/ALM. Proficiency in automotive tools such as DOORS, CANoe, JIRA, Confluence, and version control systems (e.g., Git). Excellent customer-facing and stakeholder management skills, including leading reviews, workshops, and vehicle test drives.
- Strong problem-solving, communication, and cross-functional coordination skills, with ability to work in global/multicultural environments.
- Japanese N2 and Above

【Good to Have】

- Japanese language is an added advantage
