募集要項

Our client specializes in building advanced gas flow control and monitoring systems used in semiconductor manufacturing industries with the aim to significantly enhance fab productivity and capital efficiency with our innovative solutions.

Job Descriptions

- Analyze production data and investigate assembly issues using Root Cause Analysis, 8D, 5 Why, Fishbone Diagram, and FMEA to implement effective corrective and preventive actions (CAPA).
- Design, implement, and optimize tooling, jigs, and fixtures to streamline back-end production workflows.
- Lead continuous improvement initiatives to minimize material scrap and optimize line cycle times.
- Maintain comprehensive engineering documentation, including SOPs, work instructions, and ISO compliance records.
- Support equipment selection, installation, validation, and commissioning to achieve production and quality targets.

Job Requirements

- Degree / Bachelor's Degree (Undergraduate) in Electronic Engineering, Manufacturing Engineering, Mechanical Engineering, or a related field.
- Min 1 – 2 years of manufacturing engineering or process experience in an electronics/assembly manufacturing environment.
- Proficient in problem-solving methodologies such as 8D, 5-Why, pFMEA, Hypothesis Testing, PDCA, and Six Sigma concepts.
- Hands-on capability in tooling and fixture design.
- Familiarity with ISO documentation and quality management system requirements.
