募集要項

About the role
The (Senior) Structural Engineer role involves delivering structural design solutions for a range of civil and industrial projects, including residential, commercial, industrial, and infrastructure developments. The position requires close collaboration with multidisciplinary teams to provide high-quality designs that comply with Australian Standards.

Responsibilities

- Carry out structural design for civil and industrial projects, including residential buildings, commercial developments, factories, and infrastructure works.
- Analyse and calculate structural loads, develop structural models, and propose appropriate structural solutions based on technical and architectural requirements.
- Prepare, review, and approve structural drawings produced by drafting and technical teams.
- Coordinate with architects, MEP engineers, and other stakeholders to ensure integrated and optimised design

outcomes.

- Monitor technical quality and ensure compliance with Australian Standards.
- Provide technical support during construction, including clarification of drawings and resolution of site-related issues.
- Participate in technical discussions, present engineering solutions, and contribute to structural design optimisation.

Requirements

- Bachelor's degree in Civil & Industrial Construction, Structural Engineering, or a related discipline.
- Minimum 2–3 years of structural design experience on projects serving the Australian market.
- Previous experience within an international consulting environment is advantageous.
- Proficiency in AutoCAD, Inducta Suites, or equivalent structural engineering software.
- Strong understanding of structural mechanics, construction materials, and relevant design standards.
- Ability to read and interpret technical drawings accurately.
- Logical and analytical thinking with strong attention to detail.
- Ability to work independently and manage assigned responsibilities effectively.
- Good written and verbal communication skills in English.
- Strong teamwork, communication, and stakeholder coordination skills.
- Proactive, responsible, and committed approach to work.

About the company
An established engineering consultancy provides structural engineering design services for a diverse portfolio of civil and industrial projects. The organisation works within an international environment and delivers projects in accordance with recognised international design standards.
