募集要項

Position Overview
This role focuses on the design and development of electronic circuits for automotive lighting products, including headlamps, rear lamps, and signal lamps. You will join the Circuit Technology Group (CTG), a team of approximately 10 members, and work closely with both local and Japanese engineering teams to support product development and innovation.
Key Responsibilities

- Design and develop electronic circuits for automotive lighting applications.
- Design LED driver circuits and power circuits for automotive products.
- Conduct EMC/EMI testing, analysis, and countermeasure implementation.
- Review PCB designs and provide technical recommendations.
- Perform design validation, testing, debugging, and troubleshooting activities.
- Coordinate with overseas engineering teams and suppliers, particularly in Japan, throughout the development process.

Qualifications

- Bachelor's degree in Electrical Engineering, Electronics Engineering, Mechatronics Engineering, or a related field.

- Experience in electronic circuit design for electrical or electronic products.
- Automotive electronics development experience is preferred.
- Knowledge of EMC/EMI standards, testing methodologies, and troubleshooting techniques.
- Hands-on experience with schematic design tools such as OrCAD or equivalent platforms (e.g., Altium Designer, Cadence, Zuken CR-8000).
- Familiarity with PCB design and electronic product development processes is an advantage.
- Good analytical, problem-solving, and troubleshooting skills.
- Ability to communicate in English is preferred.
