募集要項

A leading mobility technology company and part of a major global mobility group is seeking an experienced **Cloud DevOps Engineer** to build and operate cloud infrastructure, with a focus on AWS networking and infrastructure automation. You'll build CI/CD pipelines, automate network deployments and configuration, and troubleshoot connectivity and security issues

across cloud environments

Responsibilities:
- Build and maintain CI/CD pipelines for application builds, testing, and deployment. Manage self-hosted runners and integrate them with GitHub.
- Manage cloud infrastructure and DNS across AWS, Azure, or GCP, with an emphasis on Amazon Route 53 and private connectivity on AWS.
- Build reusable Terraform modules and automated deployment workflows for network infrastructure. Use Ansible to manage infrastructure configuration.
- Operate Kubernetes environments, including Amazon EKS, and implement access controls and vulnerability management practices.
- Troubleshoot cloud connectivity and security issues. Participate in incident investigation, service restoration, and root-cause analysis.
- Maintain architecture diagrams, design decisions, and operational procedures. Identify opportunities to automate and standardize recurring work.

Why you should apply:
- Help build, automate, and operate the cloud infrastructure supporting Woven City, one of Woven by Toyota's flagship projects.
- Work hands-on with AWS networking. You'll manage private connectivity and DNS and troubleshoot complex cloud networking issues

Company details:
A global mobility technology organization backed by one of Japan's most recognized automotive groups, developing next-generation technologies across autonomous driving, AI, robotics, and smart city infrastructure. The organization brings together international technology talent to build innovative solutions with a strong focus on quality, safety, and real-world implementation.

Work hours: 9:00–18:00
Work location: Tokyo
Work style: 4 days in office / 1 day Work From Home (First month: 5 days in office)
Holidays: Weekends, public holidays, year-end and New Year holidays, paid leave, and other special leave
Benefits: Full social insurance, DC pension plan, transportation expenses, Skillhouse University, Test Payback System, and other benefits

スキル・資格

- 8+ years of experience in DevOps, cloud engineering, infrastructure engineering, or site reliability engineering.
- Hands-on experience building and maintaining CI/CD pipelines.
- Strong Linux administration and cloud networking skills, including hands-on experience with AWS PrivateLink, Amazon Route 53, cloud DNS, and private connectivity.
- Proficiency with Terraform for infrastructure provisioning and Ansible for configuration management.
- Hands-on experience with Kubernetes or Amazon EKS.
- Strong scripting and API integration skills to automate network operations, testing, and configuration validation.
